PROFESSIONAL SUMMARY

Certified IBM SkillsBuild Cybersecurity Analyst pursuing a Bachelor of Science in Computer Science at the University of the People, with hands-on experience in log analysis, security monitoring, and incident-oriented documentation. Focused on Security Operations Center (SOC) work — alert triage, log analysis, and threat identification. Available for remote, hybrid, or on-site roles, including rotating 24/7 SOC shifts and entry-level Tier 1 Analyst positions.

CORE SKILLS

Log Analysis • SIEM Fundamentals (Splunk) • Alert Triage • Vulnerability Assessment • Operating System Security • Network Security Fundamentals • Identity & Access Management (IAM) • MITRE ATT&CK Framework (in progress) • Incident Documentation • Analytical Thinking • Attention to Detail • Communication

TECHNICAL TOOLS

Git & GitHub • Splunk • Nmap • Windows Security • Linux • Microsoft Word • Microsoft Excel • Google Docs • Canva
Currently building: SOC Level 1 skills (TryHackMe), MITRE ATT&CK framework, Wireshark, Microsoft Defender, Microsoft Sentinel
AI Literacy: Practical understanding of generative AI capabilities, prompting, and responsible/ethical use (Accenture, 2026)

CYBERSECURITY PORTFOLIO PROJECTS

IBM SkillsBuild Cybersecurity Portfolio Program

Enterprise Cybersecurity Assessment & Improvement Plan (Capstone)

- Assessed security posture across 6 domains (OS security, firmware, risk management, physical security, administrative controls, backup planning) for a simulated 250-employee logistics company, identifying 6 major risk categories including ransomware, phishing, and unauthorized access
- Searched and analyzed logs in Splunk to support security assessment findings and threat identification
- Delivered a phased 90-day remediation roadmap with prioritized actions across three implementation stages

Operating System Security Assessment

- Evaluated 5 core OS security domains — patch management, port/device exposure, event logging, authentication controls, and backup readiness
- Produced a security hardening plan with actionable recommendations to reduce attack surface and strengthen monitoring

Risk Assessment

- Identified and evaluated 8 risks (4 external: ransomware, DDoS, third-party compromise, natural disaster; 4 internal: phishing, weak passwords, device loss, insider threat) for a simulated 250-employee logistics company
- Assessed business impact and assigned risk tolerance ratings for each, supporting prioritized mitigation planning aligned with NIST risk management principles

Additional Projects

Physical Security Control Plan, Administrative Control Plan, Backup & Recovery Plan, Security Firmware Plan — full documentation available on GitHub: github.com/danieltetenu-sec

CERTIFICATIONS

- IBM SkillsBuild Certified Cybersecurity Analyst (2026)
- IBM: Security Operations and Management (2026)
- IBM: Incident Response and Systems Forensics (2026)
- IBM: System and Network Security (2026)
- Additional IBM SkillsBuild badges (6+) — Credly

EDUCATION

BSc Computer Science (In Progress) | *University of the People*

Senior Secondary School Certificate Examination (SSCE) | *National Examinations Council (NECO), 2008*

LANGUAGES

English (Fluent)
