PROFESSIONAL SUMMARY

Certified IBM SkillsBuild Cybersecurity Analyst pursuing a Bachelor of Science in Computer Science at the University of the People, with hands-on experience in security risk assessment, incident-oriented documentation, and enterprise security improvement planning. Focused on Security Operations (SOC), Governance, Risk & Compliance (GRC), and defensive cybersecurity. Available for remote, hybrid, or on-site roles, including rotating SOC shifts, internships, and entry-level Cybersecurity Analyst positions.

CORE SKILLS

Security Risk Assessment • Vulnerability Assessment • Operating System Security • Security Policy Development • Physical & Administrative Security Controls • Backup & Recovery Planning (3-2-1 Rule) • Governance, Risk & Compliance (GRC) • Network Security Fundamentals • Identity & Access Management (IAM) • NIST Risk Framework Alignment • Cybersecurity Documentation • Analytical Thinking • Problem Solving • Communication • Attention to Detail

TECHNICAL TOOLS

Git & GitHub • Splunk • Nmap • Windows Security • Linux • Microsoft Word • Microsoft Excel • Google Docs • Canva

Currently building: SOC Level 1 skills (TryHackMe), MITRE ATT&CK framework, Wireshark, Microsoft Defender, Microsoft Sentinel
AI Literacy: Practical understanding of generative AI capabilities, prompting, and responsible/ethical use (Accenture, 2026)

CYBERSECURITY PORTFOLIO PROJECTS

IBM SkillsBuild Cybersecurity Portfolio Program

Enterprise Cybersecurity Assessment & Improvement Plan (Capstone)

- Assessed security posture across 6 domains (OS security, firmware, risk management, physical security, administrative controls, backup planning) for a simulated 250-employee logistics company, identifying 6 major risk categories including ransomware, phishing, and unauthorized access
- Searched and analyzed logs in Splunk to support security assessment findings and threat identification
- Delivered a phased 90-day remediation roadmap with prioritized actions across three implementation stages

Risk Assessment

- Identified and evaluated 8 risks (4 external: ransomware, DDoS, third-party compromise, natural disaster; 4 internal: phishing, weak passwords, device loss, insider threat) for a simulated 250-employee logistics company
- Assessed business impact and assigned risk tolerance ratings for each, supporting prioritized mitigation planning

Operating System Security Assessment

- Evaluated 5 core OS security domains — patch management, port/device exposure, event logging, authentication controls, and backup readiness
- Produced a security hardening plan with actionable recommendations to reduce attack surface and strengthen monitoring

Additional Projects

- Physical Security Control Plan — 6 layered controls (access control, CCTV, visitor management, fire suppression, UPS, environmental monitoring) mapped to a government-contract-compliant facility layout
- Administrative Control Plan — onboarding + quarterly cybersecurity awareness training program with multi-channel threat communication strategy, informed by phishing-awareness training (Accenture)
- Backup & Recovery Plan — 3-2-1 backup strategy with daily incremental / weekly full backups across on-site and encrypted off-site storage
- Security Firmware Plan — assessed 3 firmware vulnerability categories across network and mobile devices with a monthly update/verification plan

Full documentation for all projects available on GitHub: github.com/danieltetenu-sec

CERTIFICATIONS

- IBM SkillsBuild Certified Cybersecurity Analyst (2026)
- IBM SkillsBuild Digital Badges (6+) — Credly
- Accenture Learning to Earning Professional Development Certificates (7+)

EDUCATION

BSc Computer Science (In Progress) | *University of the People*

Senior Secondary School Certificate Examination (SSCE) | *National Examinations Council (NECO), 2008*

LANGUAGES

English (Fluent)
